

Job Title: Full Stack Software Engineer

Company: InnovateTech Systems

Location: New York, NY / Hybrid

ROLE OVERVIEW:

We are seeking an ambitious Full Stack Developer to build next-generation web applications. You will work across both client-side

RESPONSIBILITIES:

- Architect and develop scalable web applications using React, TypeScript, and Node.js.
- Build resilient backend microservices with REST APIs and PostgreSQL database storage.
- Manage containerization workflows using Docker and Kubernetes.
- Implement CI/CD deployment pipelines on Amazon Web Services (AWS).
- Collaborate in an Agile team with continuous code integration and automated testing.

REQUIRED TECHNICAL SKILLS:

- Proficiency in JavaScript, TypeScript, and Node.js.
- Strong hands-on experience with modern frontend frameworks, specifically React.
- Experience with relational databases (PostgreSQL or MySQL) and NoSQL (MongoDB or Redis).
- Experience with Docker and container orchestration (Kubernetes).
- Familiarity with cloud services on Amazon Web Services (AWS) or Google Cloud Platform (GCP).
- Experience with REST API design, Git, GitHub, and Agile methodologies.
- Excellent communication, critical thinking, and problem solving skills.
